

Dear Anesthesiology Provider,

In order to understand practice of perioperative management of external ventricular drains (EVDs), we are conducting a survey study of anesthesiology providers called the EVD Aware Study. The results of the survey will inform our anesthesiology community regarding common perioperative EVD management strategies employed in neurocritically ill patients.

The survey takes less than 3 minutes to complete.

The survey responses are de-identified from 18 HIPAA identifiers, and will be collected on the University of Washington REDCap system hosted by Institute of Translational Health Sciences.

Your participation in this study is voluntary. If you are interested, please click the following link:
